Impact of Technology

By Taseen Ali (Batch 2017)

As we are living in a digital world where everyone is aware with the most heard term “Technology”. Have we ever tend to think what technology is and why it is so powerful that it has captured most of our world; obviously Not-But why? Its just because we are busy in our smartphones having chitchat with our friends and strangers and have thrown our families in dustbins having no concern with them- they seems useless to us having no use, It’s all just because of these social media networks-but we cant blame these always as every thing that exists must have two sides one positive and a negative, but we all have adopted the negative one and now this society is presenting a murky situation where every one has a busy schedule; no time for family and relatives but for the strangers.

Have we ever thought why we are in trouble and why youngsters of Pakistan are not capable to get a better job? Why these youngsters aren’t able to recognize themselves internationally and why always they are lacking in each sector. I tried to search for it and found several reasons in which the top most was “overuse of smart gadgets”. No matter in which sector we are working, what work we are doing? we are unable to give our best potential as we are always trying to just move on the task without any interest in it; we are using that potential and interest in chatting, watching movies, playing games etc.

All of this is also important but for a limited and specified time not for the whole day especially during our precious time when doing our important work either of business or Home. We all need to spend as much time as possible with our family, friends and relatives instead of chatting with strangers whom we don’t know and never met.
